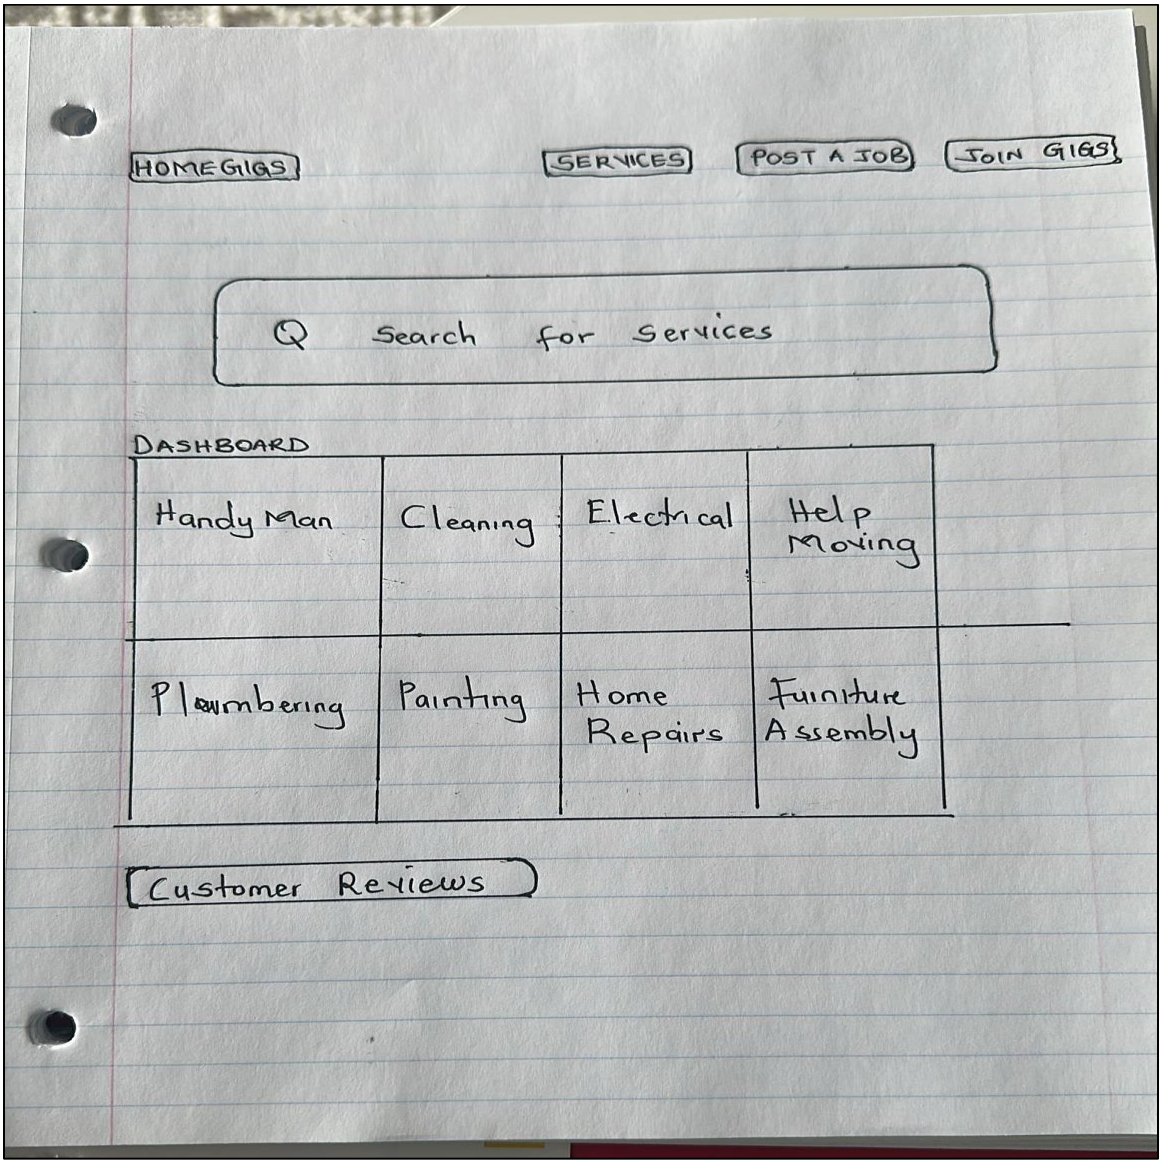
ENSE 281 – GROUP E PROJECT (HOMEGIGS) LO-FI SKETCHES

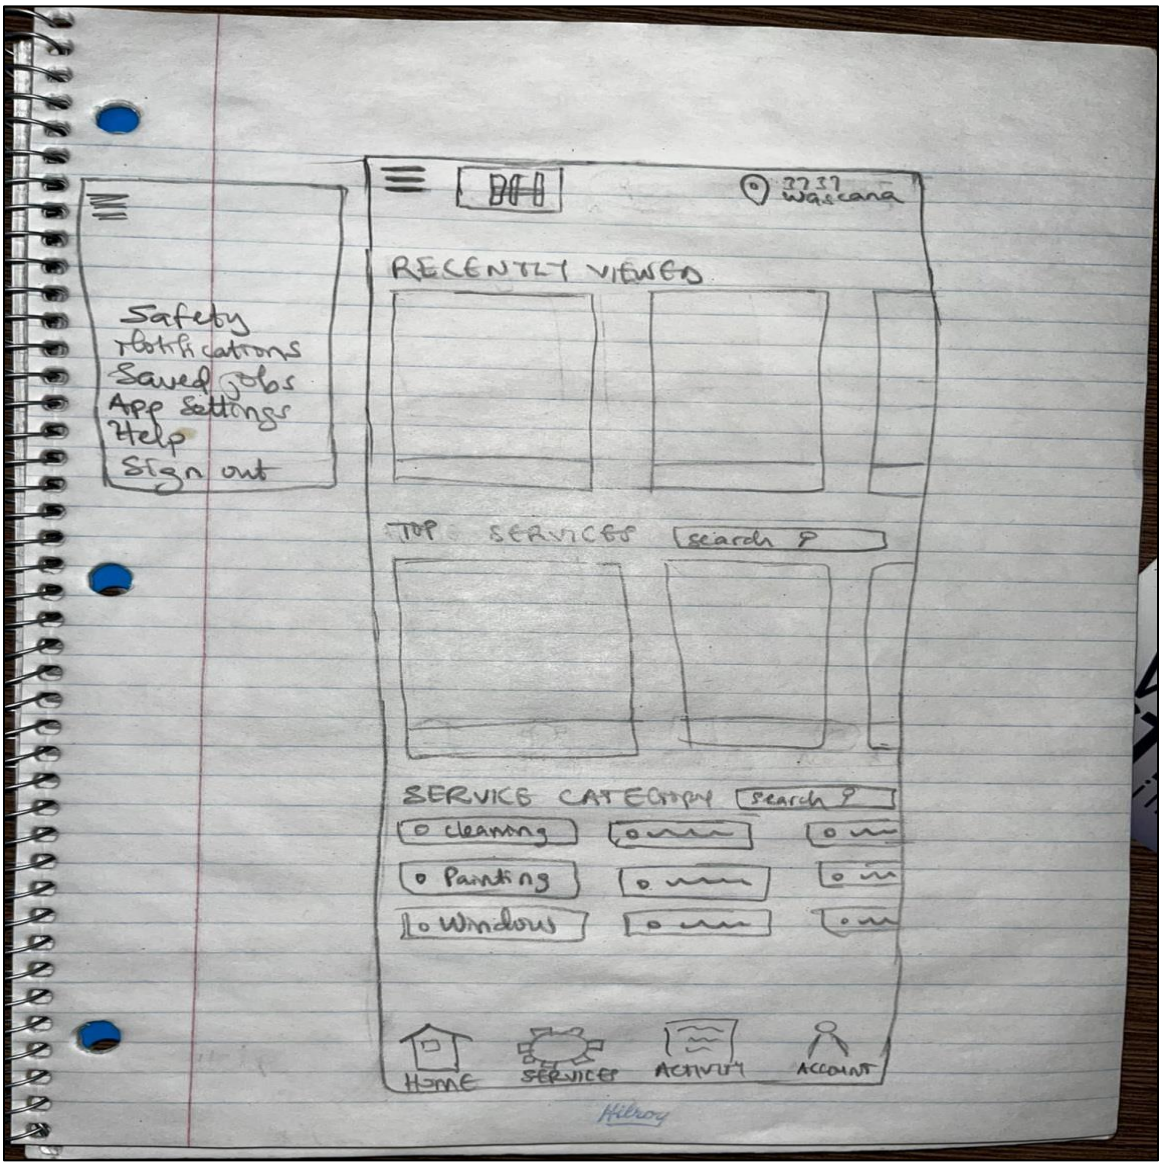
Sketch 01:

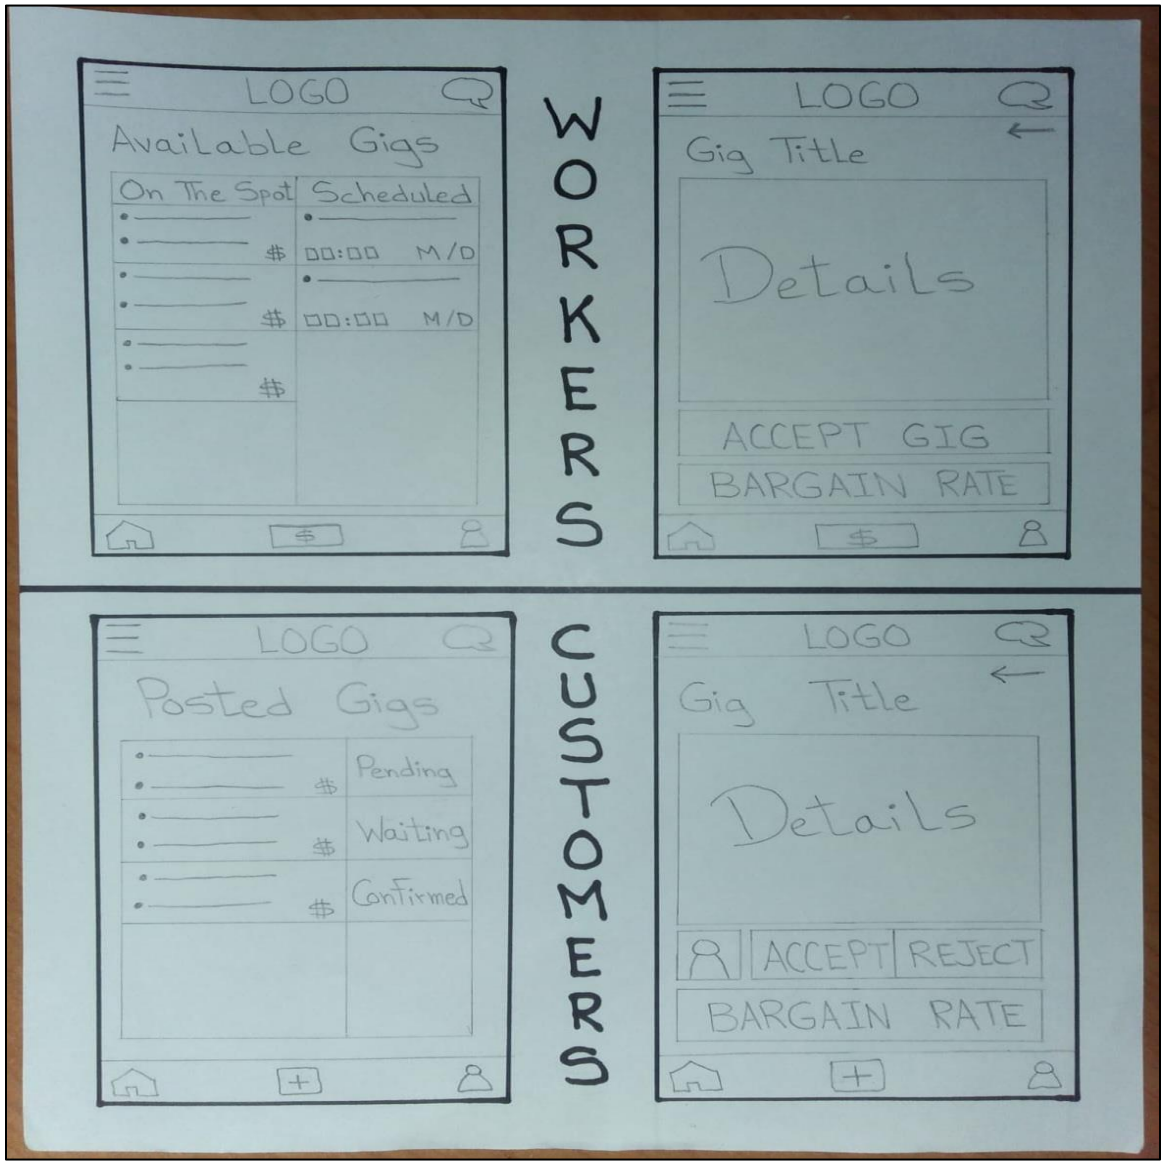
- The sketch was very simple as the team was working on the most basic layout for the dashboard of the application. This sketch only consists of box structures, a search bar, and some other interactive options.



Sketch 02:

- The sketch was a bit advanced then the first sketch as it includes sliding boxes as recently viewed section and an additional side menu as well. Some more icons were introduced at the bottom.



Sketch 03:


- The sketch added a customer dashboard along with a worker dashboard to properly map out the design structure for both sides. It includes more details than the previous sketches and had the layout providing accept, reject, and bargain options, which were the focused MVPs of the project.
